DHM
RADAR

PLATFORM GUIDE

COMPLETE WALKTHROUGH

Everything you need to know to use DHM Radar effectively — from reading signals and alerts to managing your trades and Telegram channels.

Momentum Signals | Live Alerts | Swing Plays | Trade Journal | Top Gainers | AI Picks | Telegram Channels

INSIDE THIS GUIDE

TABLE OF CONTENT

Each section covers one page of the platform — what it does, how to read it, and how to get the most value from it.

15
PAGES COVERED

5,000+
STOCKS SCANNED DAILY

24/5
LIVE MARKET COVERAGE

CONTENTS

01 **Dashboard**
Your daily overview — stats, alerts, news feed

02 **Top Gainers**
Pre-market, market hours & after-hours movers

03 **Live Alerts**
DHM Radar feed + Live Momentum side by side

04 **News**
Live news feed for stocks $0.10–$20

05 **Signals — Momentum & Swing**
T1–T4 targets, stop loss, date navigation

06 **Golden Tickers**
Curated high-conviction setups

07 **Short Squeeze Scanner**
Short float %, borrow rate, days-to-cover

08 **Stock Browser & Screener**
TradingView charts + live Finviz-style filters

09 **Trade Journal**
Track every trade, P&L, deposits per target

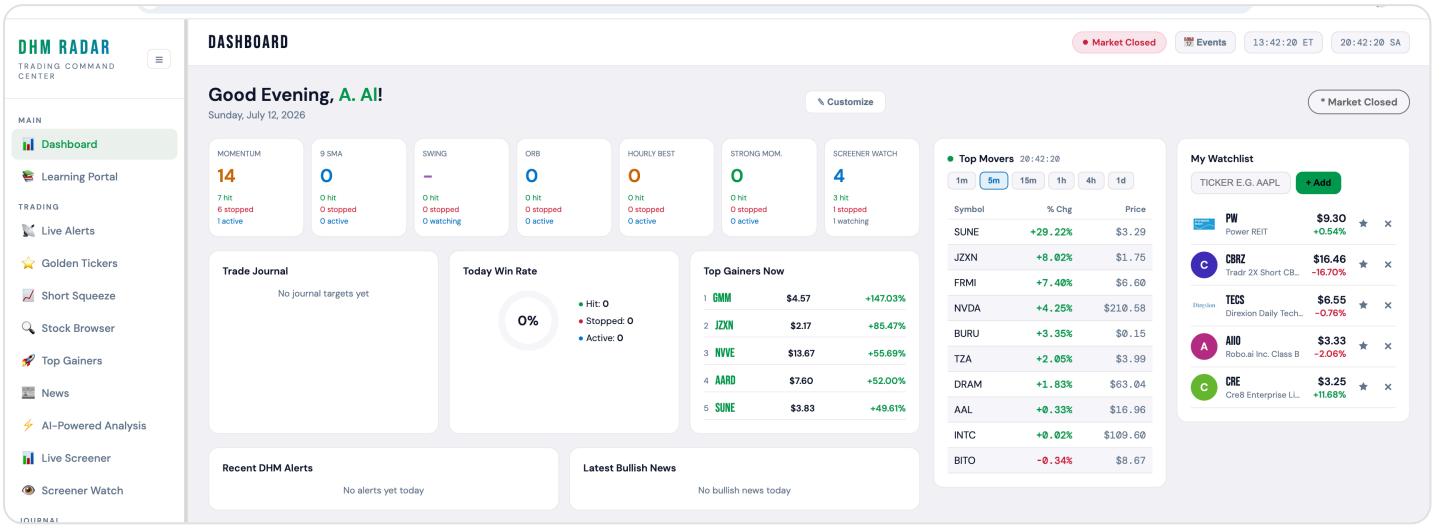

10 **Telegram, Settings & Subscription**
Channels, profile, plans, upgrade options

01

MAIN

DASHBOARD

The **Dashboard** is your daily command center. Every time you open DHM Radar this is the first page you land on — live stats, win rate, today's top gainers, latest alerts, and breaking news all in one view without switching tabs.

Stats Cards

Total signals today, win rate, active plays, and hits — updated live

Win Rate Circle

Visual gauge of today's overall signal accuracy across all strategies

Top Gainers Widget

Live biggest movers from the Top Gainers scanner shown inline

Latest Bullish News

Breaking news for $0.10–$20 stocks with relevance scoring

PRO TIP

Click the **Customize Dashboard** button (top right) to choose exactly which widgets appear — toggle signal types, news filter, top movers, trade journal stats, and more. Each user can set their own layout.

02

MAIN

LEARNING PORTAL

The **Learning Portal** teaches you the technical concepts behind every signal DHM Radar generates. Before trading any signal, understand the "why" behind it here. Each lesson is short, visual, and focused on what our scanners actually use.

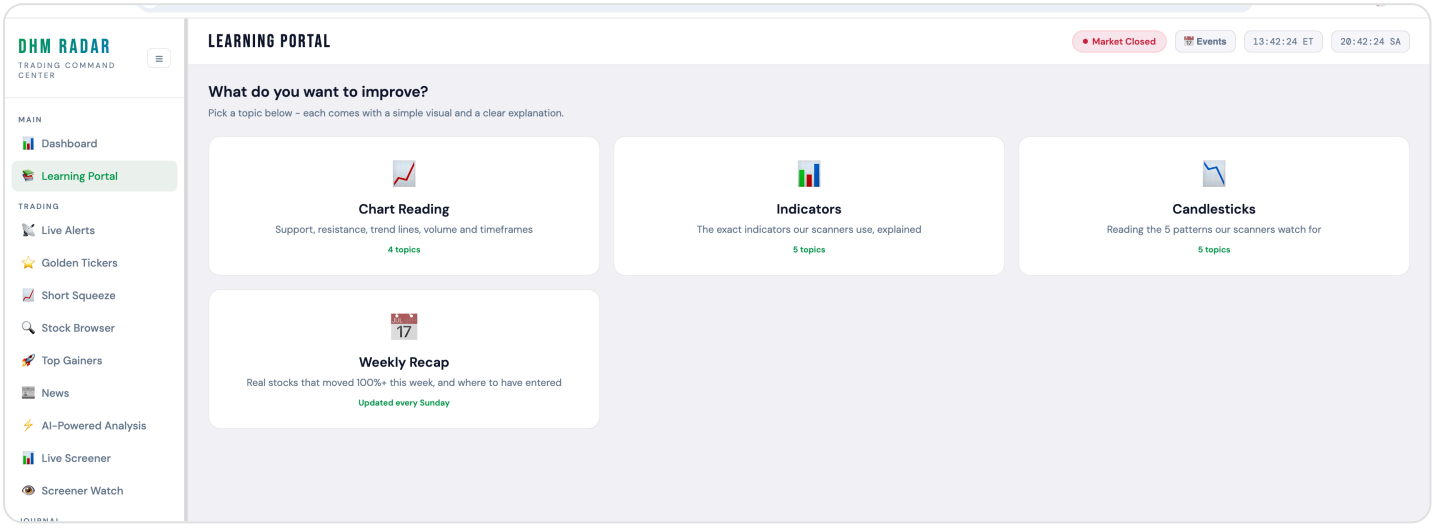

Chart Reading

Support & resistance, trend lines, volume, and the timeframes our scanners use

Indicators

VWAP, RVOL, RSI, EMA — the exact indicators our algorithms check before alerting

Candlesticks

The 5 candlestick patterns our scanners watch for — Hammer, Engulfing, Morning Star and more

Weekly Recap

Real moves from the past week — what triggered, what hit targets, and what to learn from it

PRO TIP

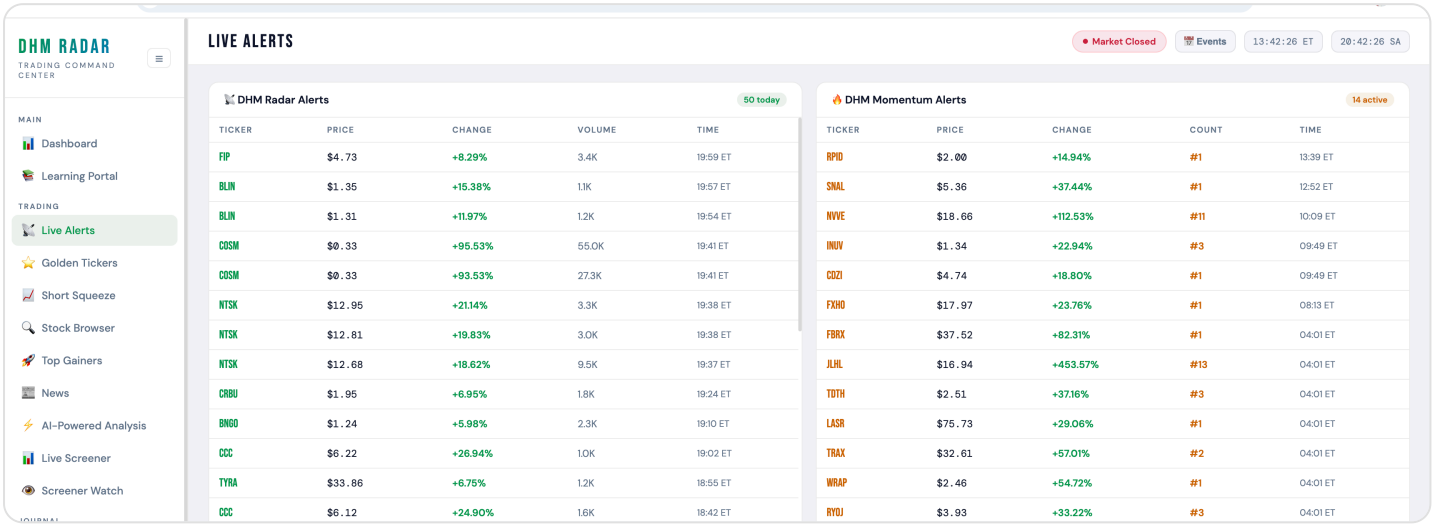

Start with **Chart Reading** if you are new. It covers support/resistance and volume — the two factors that drive every single signal DHM Radar generates. The other lessons will make much more sense after.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

TRADING — ALERTS & SCANNERS

LIVE ALERTS

Two live scanner feeds running **side by side** — every signal hit as it happens, from 4 AM to 8 PM ET. This is the engine room of DHM Radar. Left panel = raw scanner hits. Right panel = high-conviction momentum confirmed alerts.

LEFT PANEL — **DHM Radar Alerts**

WebSocket scanner monitoring 5,000+ US stocks. Every row is a scan hit — ticker, price, % change, and time. Color: green = stock is up, red = stock is down.

RIGHT PANEL — **DHM Momentum Alerts**

Stocks that hit 6 or more scan signals in the same session. These are the highest-conviction plays — they have triggered repeatedly, not just once.

COUNT — **Scan Count Column**

Shows how many times that ticker has been flagged today. A count of 10+ means the scanner has seen the signal repeatedly — very high conviction.

REFRESH — **Refresh Button**

Manually refresh both feeds if the screen has been idle. Normally updates automatically every minute.

PRO TIP

When the same ticker appears in **both panels** on the same day — that is your highest-conviction signal. It means the stock triggered the main scanner repeatedly AND crossed the 6-hit momentum threshold. Cross-reference it immediately in AI-Powered Analysis.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

TRADING — ALERTS & SCANNERS

GOLDEN TICKERS

A curated live watchlist organized into **three heat tiers**. Every ticker here was flagged by DHM Radar scanners. As momentum builds, tickers automatically progress from Watching to Heating to Hot.

WATCHING

Setup forming. Scanner flagged it. Added to radar — no action needed yet. Wait for momentum to build and volume to confirm.

→

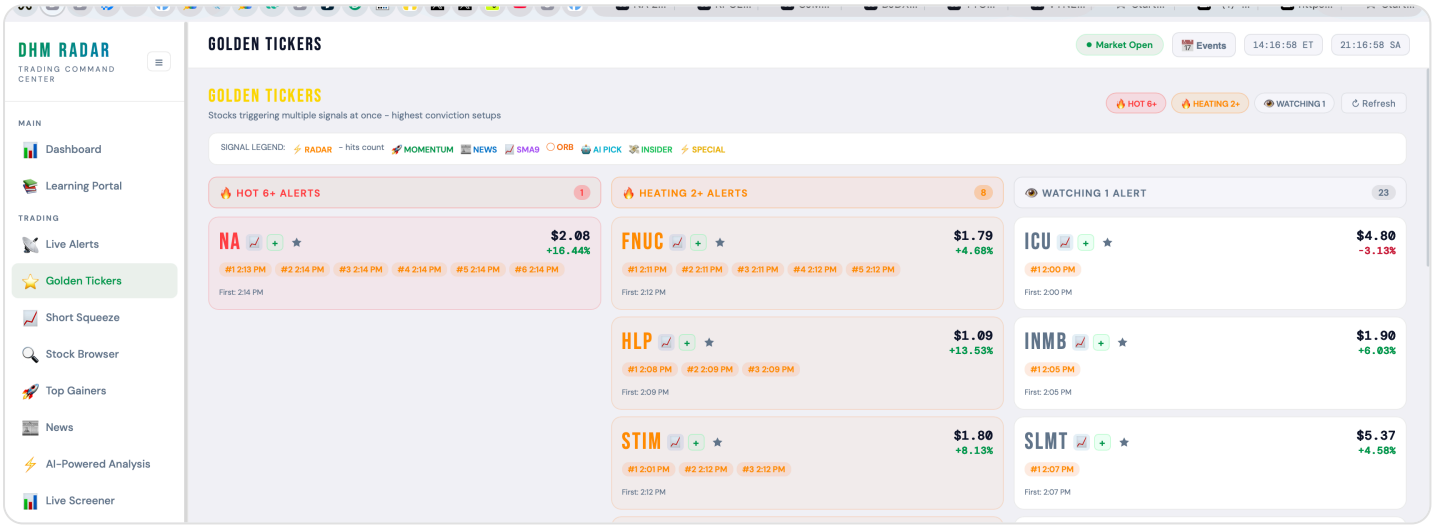

HEATING

Multiple signals triggered. Volume picking up. Getting close to a breakout. Start watching the price closely and prepare your entry plan.

→

HOT

Active breakout confirmed. High volume. Highest conviction. This is the tier where trades happen — act now or miss the move.

EDIT **Edit Button**
Modify targets, stop loss, tier, or notes on any ticker card at any time.

× DELETE **Delete Button**
Remove a ticker from the watchlist once the setup is done or invalidated.

+ ADD TO SCREENER WATCH **Add to Screener Watch**
Send any Golden Ticker to your personal Screener Watch for live price tracking with your custom entry price and targets.

PRO TIP

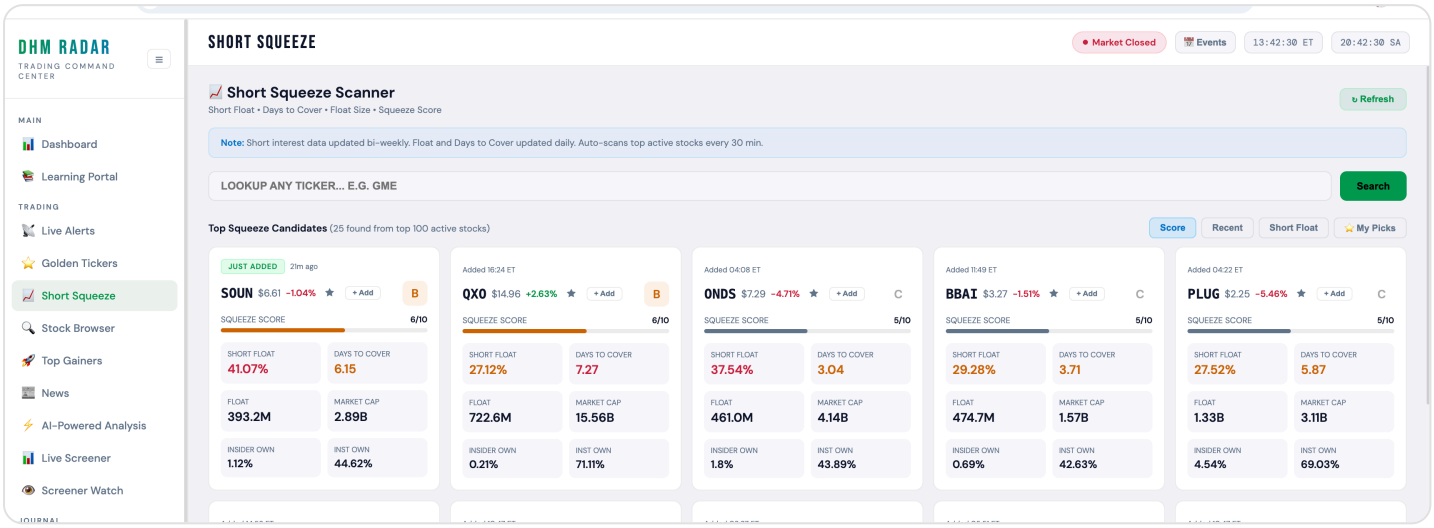

Each ticker card shows the full scan history — every time DHM Radar flagged that stock. The more scan hits stacked on a ticker, the stronger the setup. A stock with 10+ hits across multiple days in the HOT tier is a very high conviction play.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

TRADING — ALERTS & SCANNERS

SHORT SQUEEZE SCANNER

Stocks with a high short float can explode when short sellers are forced to buy back their shares to cover losses. This scanner finds those stocks **before** the squeeze happens.

SCORE — **Squeeze Score (1–10)**
DHM's proprietary score combining all squeeze factors. Score 7+ = high squeeze potential. Score 9–10 = extreme setup.

SHORT FLOAT % — **Short Float Percentage**
Percentage of available shares that are currently sold short. Over 20% = significant short interest. Over 40% = extreme — any positive news can trigger a violent squeeze.

DAYS TO COVER — **Days to Cover**
How many trading days it would take all short sellers to exit based on average daily volume. Higher = bigger squeeze potential — they are trapped for longer.

SEARCH — **Lookup Any Ticker**
Type any ticker (e.g. GME) to instantly see its squeeze data — score, short float, days to cover, float, market cap, and ownership.

+ ADD — **Add to Screener Watch**
Adds this squeeze candidate to your personal Screener Watch for live price tracking with targets.

PRO TIP

Focus on stocks with **Short Float >25%**, **Days to Cover >5**, and **Score 7+**. That combination means shorts are trapped — a small positive catalyst (news, earnings, partnership) can trigger a violent upside squeeze. Pair with the News feed to catch the catalyst early.

06

TRADING — ALERTS & SCANNERS

STOCK BROWSER

Browse all US stocks with live price data, sector filters, and real-time percentage changes. Think of it as your personal market overview — every stock, every sector, live.

SECTOR TAGS — **Tech / Health / Biotech / Oil & Gas...**
Click any sector tag to filter the table to that industry only. Click "All" to reset.

SORT — **Sort by % Change**
Ranks stocks by biggest movers at the top — use this every morning after 9:30 AM to spot stocks already running with volume.

★ STAR — **Add to Screener Watch**
Click the star next to any ticker to add it to your Screener Watch with live price tracking. A tooltip confirms "Add to Screener Watch".

CHART — **Chart Button**
Opens a live TradingView chart for that ticker in a new tab. Use this to verify the setup before adding to your watchlist.

PRO TIP

Every morning after 9:30 AM ET — open Stock Browser, sort by **% Change**, and scan the top 20 movers. Any stock already up 5%+ with high relative volume (RVOL) is a candidate to cross-check in the Short Squeeze or AI-Powered Analysis page.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

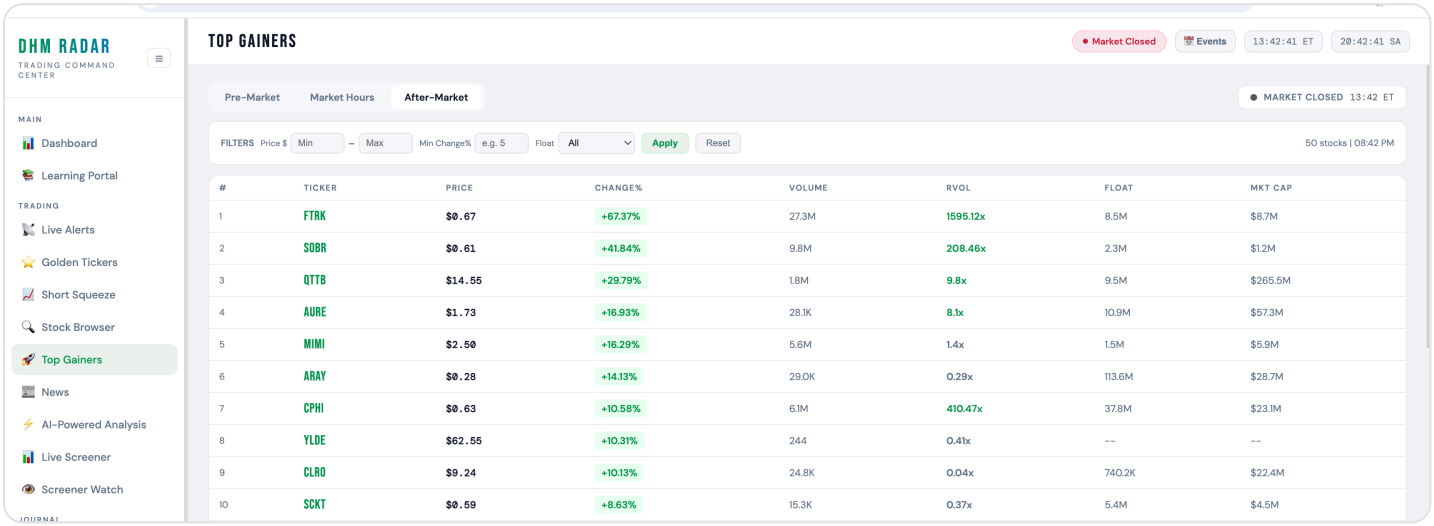

07

TRADING — ALERTS & SCANNERS

TOP GAINERS

Live ranking of today's biggest percentage movers, split across three market sessions. Scanned directly from TradingView in real-time — no delay, no stale data.

Pre-Market | Market Hours | After-Market

PRE-MARKET TAB — **4:00 AM – 9:30 AM ET**

The most important session for momentum traders. Stocks gapping up here with volume are the primary candidates for the trading day. Check this tab first every morning.

MARKET HOURS TAB — **9:30 AM – 4:00 PM ET**

Real-time movers during regular trading hours — these are live breakouts happening right now. RVOL column shows how much stronger today's volume is vs the 30-day average.

AFTER-MARKET TAB — **4:00 PM – 8:00 PM ET**

Post-close movers — often driven by earnings reports or news released after 4 PM. These are tomorrow's pre-market plays. Add the top ones to Screener Watch tonight.

FILTERS — **Price / % Change / Volume Filters**

Narrow the list to stocks that match your trading style. Set a max price and min % change, then click Apply to refresh the filtered list.

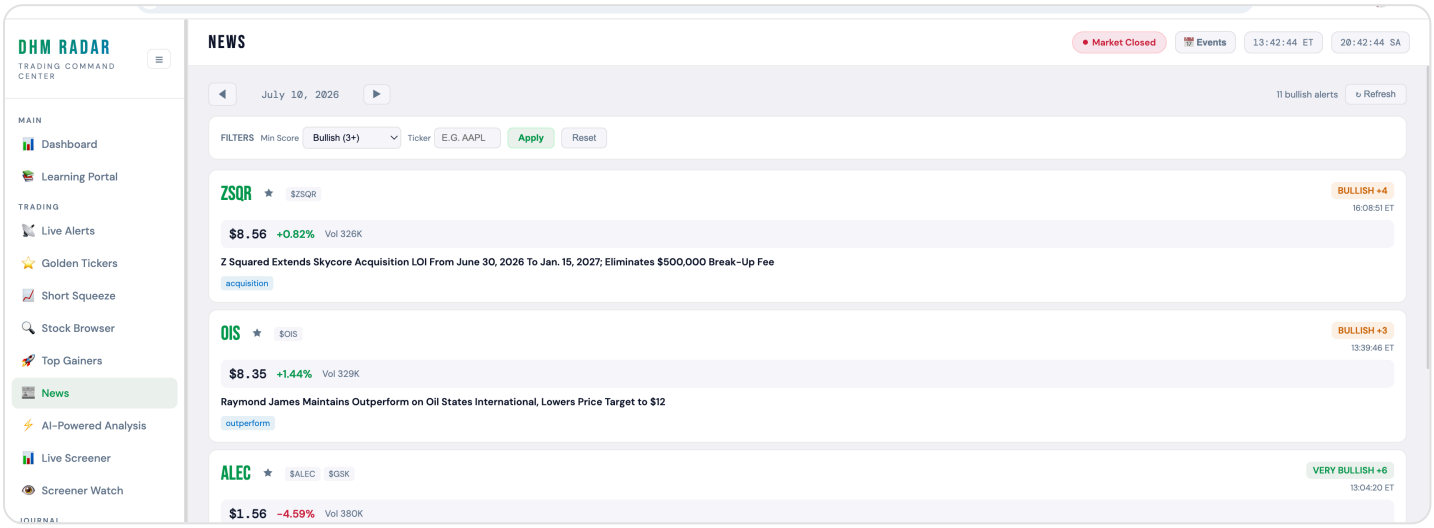

PRO TIP

Check the **Pre-Market tab every day between 8–9 AM ET** (3–4 PM Saudi). Stocks already up 10%+ pre-market with RVOL 3x+ are the most likely to continue running when the market opens at 9:30 AM. These are the plays the DHM Radar Momentum scanner will confirm in real-time.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

NEWS

Real-time news feed filtered **exclusively for stocks priced $0.10–$20**. Stories about stocks above $20 are automatically hidden so you only see what is relevant to the DHM Radar momentum strategy.

← TODAY → — **Date Navigation**

Click the left arrow to go back to previous days and review past news. Click right to return to today. Use this to find what news triggered a past signal.

BULLISH FILTER — **All / Bullish / Very Bullish**

Switch between showing all news or only bullish-sentiment articles. "Very Bullish 3+" is the tightest filter — only the highest-confidence positive news.

SCORE FILTER — **Confidence Score (0–10)**

Set a minimum relevance score. Higher score = the news is more directly about the stock's price movement. Score 7+ is the recommended minimum for trade decisions.

REFRESH — **Refresh Button**

Pulls the latest news right now. The feed auto-refreshes every few minutes, but click Refresh if you want an immediate update.

PRO TIP

When you see a ticker in the **News feed AND in the Live Alerts panel** on the same day — that is a news-driven momentum play. The news provides the catalyst, the scanner confirms the volume reaction. Those two together are your strongest setups.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

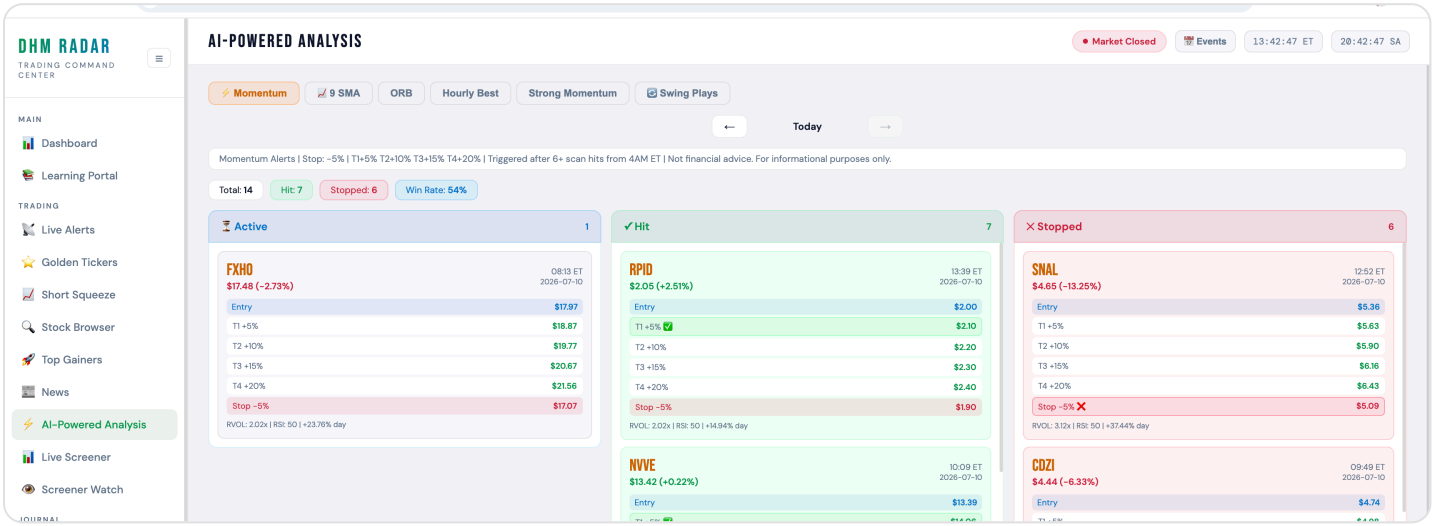

09

AI

AI-POWERED ANALYSIS

The **signals hub** — six strategy tabs in one place. Every signal generated by DHM Radar appears here, organized by strategy, with live status tracking for every play.

Momentum | 9 SMA | ORB | Hourly Best | Strong Mom | Swing Plays

ACTIVE — IN PLAY

HIT — TARGET REACHED

STOPPED — STOP HIT

MOMENTUM — **Momentum Tab — T1 +5% / T2 +10% / T3 +15% / T4 +20% / Stop -5%**

Stocks that triggered 6+ scanner hits. Each card shows entry price, live price, and auto-calculated distance to each target. Prices refresh every 30 seconds.

9 SMA / ORB — **9 SMA Pullback + Opening Range Breakout**

9 SMA: Stock dipped to the 9-period SMA and is bouncing back above it — continuation signal. ORB: Stock broke above the high of the first 30-minute candle with volume confirmation.

SWING PLAYS — **Swing Tab — T1 +8% / T2 +15% / T3 +25% / Stop -5%**

Multi-day setups (2–4 weeks). Three timeframes: SHORT, MEDIUM, LONG. Each card shows grade (A/B/C), 4H chart analysis, and momentum confirmation indicators.

DATE NAV — **← Today → Date Navigation**

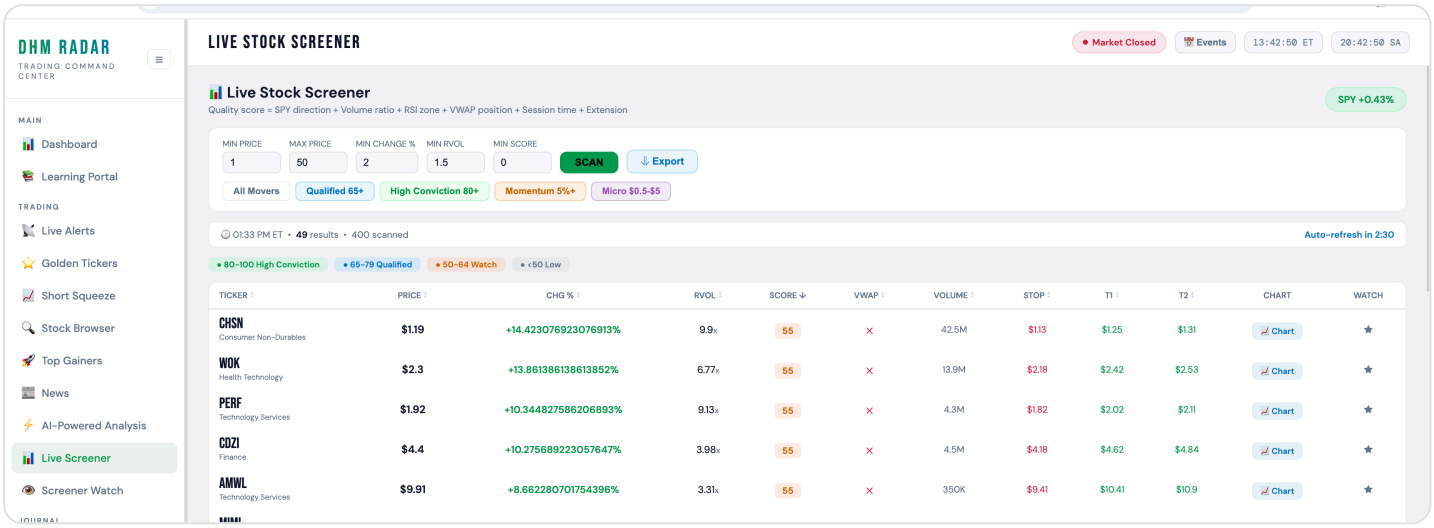

Browse back to any previous day to see what signals fired and which ones hit their targets. Full history kept permanently.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

TOOLS

LIVE SCREENER

A real-time stock screener with 5 adjustable filters. Results **auto-refresh every 3 minutes** so you always see the freshest qualified stocks without refreshing the page.

FILTERS — **Min Price / Max Price / Min % Change / FINVIZ Score / Min RVOL**

Set your parameters then click APPLY. Default: $1–$50 price, 2% min change, 80+ score, 1.5x RVOL minimum.

QUICK FILTERS — **All Movers / Qualified 80+ / High Conviction 90+ / Momentum 75+**

One-click preset screens. "High Conviction 90+" is the tightest filter — only stocks scoring above 90 on FINVIZ technicals AND passing all other filters simultaneously.

EXPORT — **Export Button**

Download the current screener results as a CSV file — useful for reviewing setups offline or logging your research.

CHART — **Chart Link (per row)**

Opens a live TradingView chart for that ticker. Always check the chart before adding to your watchlist.

★ WATCH — **Star Button (per row)**

Adds the ticker directly to your Screener Watch with the current live price as the entry. Edit targets after adding.

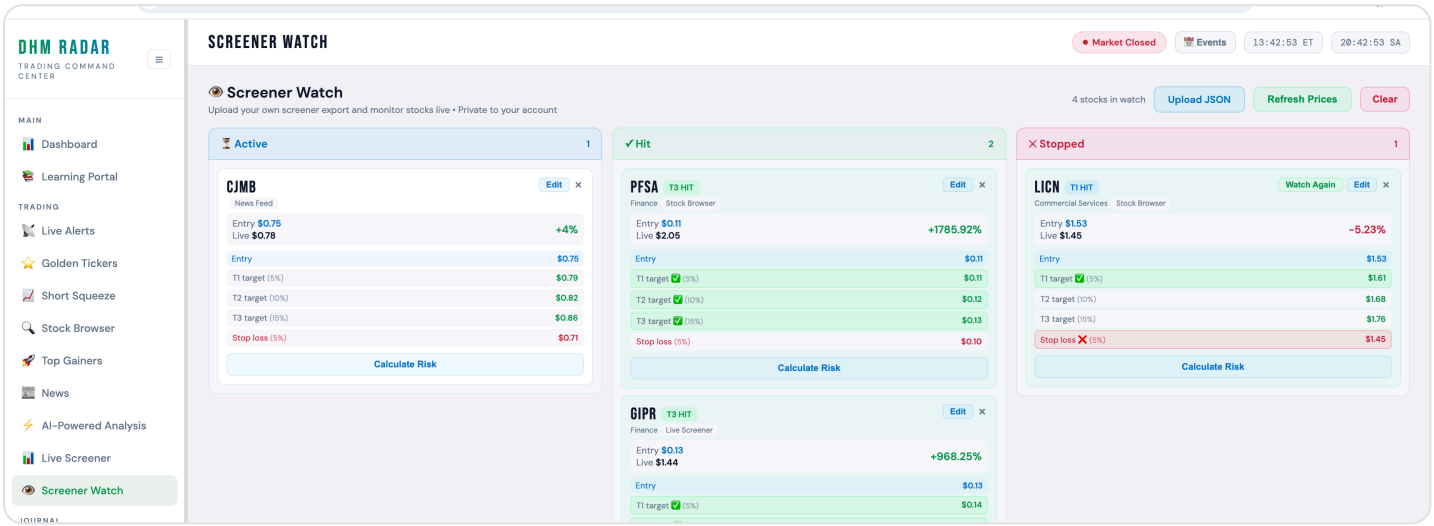

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

TOOLS

SCREENER WATCH

Your personal price-tracking watchlist. Add any stock from anywhere in the platform using the ★ star button and monitor it with your custom entry price, profit targets, and stop loss — all with live prices.

ACTIVE — WATCHING | **HIT — TARGET REACHED** | **STOPPED — STOP HIT**

UPLOAD JSON — **Import a Watchlist**
Upload a previously saved watchlist JSON file to restore your tracking positions instantly.

REFRESH PRICES — **Manual Price Refresh**
Immediately updates all live prices across every card in your watchlist. Use this whenever you want the most current data.

EDIT — **Edit Button (per card)**
Modify the entry price, T1/T2/T3/T4 targets, or stop loss on any card after it has been added.

CALCULATE RISK — **Calculate Risk Button**
Opens the Risk Calculator pre-filled with that stock's entry price and stop loss. Instantly shows your position size, max loss, and profit at each target.

PRO TIP

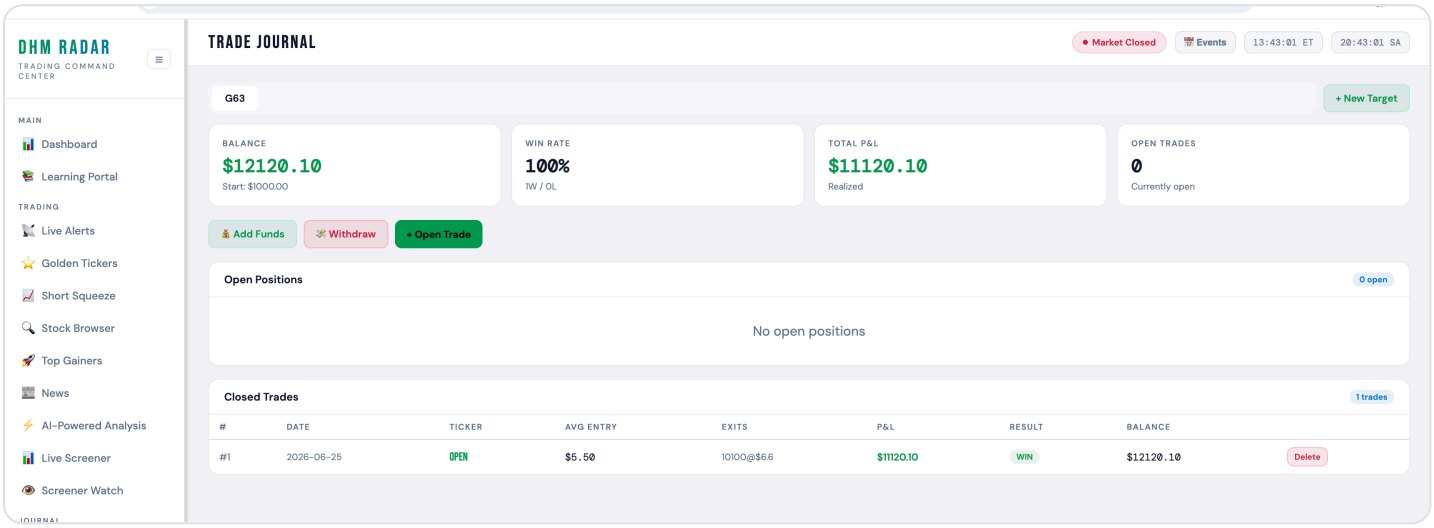

Move cards from Active to Hit or Stopped manually as your trades play out. This keeps your watchlist clean and gives you a running track record of every setup you tracked — wins, losses, and misses.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

JOURNAL

TRADE JOURNAL

A full trading journal for tracking every trade across one or more account targets. **Private to your account** — no one else can see your trades, balance, or performance.

+ NEW TARGET — **Create a Portfolio Target**
Create a new trading goal (e.g. "Grow $10,000 to $20,000"). Each target is a separate account tracker with its own balance, P&L, and trade history.

ADD FUNDS — **Record a Cash Deposit**
Add a deposit to your target balance. This keeps your balance accurate and reflects your real account.

WITHDRAWAL — **Record a Withdrawal**
Log any cash you take out of the account. Deducted from your balance automatically.

+ OPEN TRADE — **Log a New Trade**
Enter the ticker, entry price, number of shares, and date. The trade appears in Open Positions with live P&L tracking.

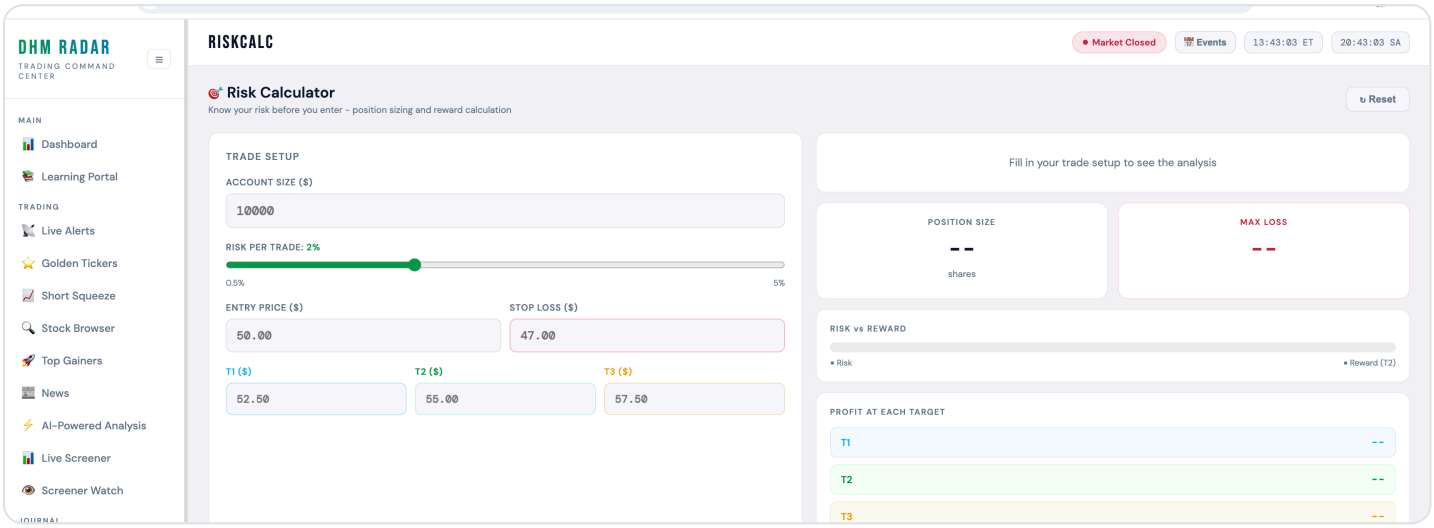

EXIT TRADE — **Close an Open Trade**
Enter your exit price — P&L, result (WIN/LOSS), and new balance are calculated automatically and moved to Closed Trades history.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

JOURNAL

RISK CALCULATOR

Calculate your **exact position size** before every trade so you never risk more than your plan allows. Fill in four numbers — the calculator does everything else instantly.

ACCOUNT SIZE

Your Total Available Capital

Enter your full account balance. The calculator uses this to determine how many dollars you can risk.

RISK % SLIDER

Risk Per Trade (1–7%)

How much of your account you are willing to lose on this trade. DHM Radar recommends 1–2% per trade. Never exceed 5%.

ENTRY / STOP

Entry Price + Stop Loss

Enter your planned buy price and stop loss. The gap between these two numbers determines your position size and max loss automatically.

RIGHT PANEL OUTPUT

Position Size / Max Loss / Risk:Reward / Profit at T1-T3

All results appear instantly on the right. Position Size = exact shares to buy. Risk:Reward = potential profit vs max loss. Aim for minimum 1:2 ratio before entering any trade.

PRO TIP

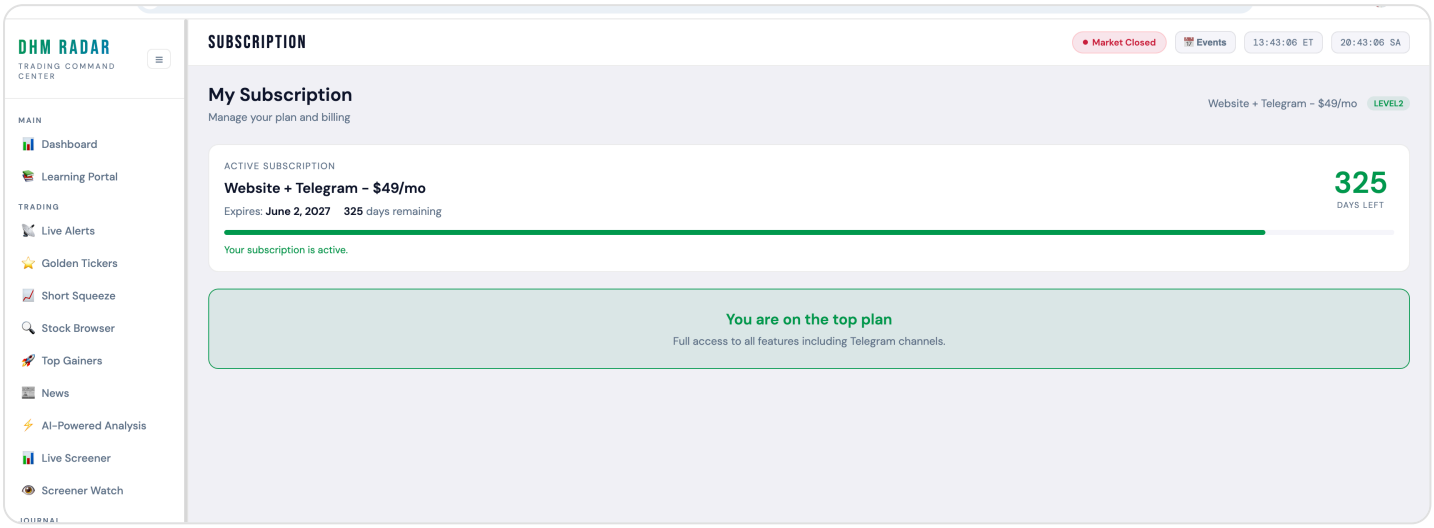

Always aim for a **Risk:Reward of at least 1:2** — meaning if you can lose $100, your T1 profit should be at least $200. The calculator shows this number before you click buy. If the ratio is below 1:2, either widen your target or tighten your stop — or skip the trade entirely.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

ACCOUNT

SUBSCRIPTION

View your current plan, exact expiry date, and days remaining. All DHM Radar plans come with a **2-day free trial** — no credit card required to start.

Trial (2 days free)

Full platform access — every page, every signal, every tool. No payment needed to start.

Level 1 — $39/month

Website access — all pages, signals, journal, screener, and tools. No Telegram channels.

Level 2 — $49/month

Everything in Level 1 plus access to all 13 Telegram alert channels in real-time.

Days Remaining Bar

Green progress bar shows how many days are left on your plan. Contact support before it runs out.

PRO TIP

Your expiry date is shown on this page. If it turns **red, your subscription has expired** and access will be limited. Contact support at alerts@dhmradar.com before the expiry date to renew without interruption.

NOT FINANCIAL ADVICE — FOR EDUCATIONAL PURPOSES ONLY

15

ACCOUNT

TELEGRAM & SETTINGS

Telegram connects your account to the 13 private DHM Radar alert channels. **Settings** controls your profile, password, theme, timezone, and language preferences.

Connect Telegram

Link your Telegram username to your DHM Radar account to activate channel access for Level 2 subscribers.

Channel Invite Links

Once connected, get your personal invite link for each of the 13 Telegram channels — Momentum, Swing Plays, News, Top Gainers, RBR, Range Plays, and more.

Profile Settings

Change your display name, email address, or password. Keep your account secure by updating your password regularly.

Theme & Timezone

Switch between Light and Dark mode. Set your timezone (default: ET) so all signal times display in your local time.

`CHECK STATUS` **Telegram Membership Check**

Verifies you are a member of all channels your plan includes. If you were removed from a channel, this button regenerates your invite link.

`DELETE ACCOUNT` **Danger Zone — Permanent**

Permanently deletes your account, all trade journal data, and watchlists. This action cannot be undone. Contact support first if unsure.

PRO TIP

Set your **timezone to your local time** in Settings so all signal timestamps (4 AM ET, 9:30 AM ET, etc.) are automatically converted and displayed in Saudi time or whichever timezone you trade from.
